EST.—MAN WITH \$1000. WEST AVENUE, 106 King street west.

EST.—LADY MOVING, THEN ONCE AGAIN, THE MORNING.

# INDUSTRY AND HIGH IDEALS

Dr. Case, of Buffalo, to the School Teachers.

## STUDY OF HISTORY

Dealt With In Able Way  
By Mr. MacPherson.

At the afternoon session of the Hamilton Teachers' Institute convention, "A Winter Lullaby" was sung by Miss Mary L. Johnson, who followed by an able address on "History as a Human Subject," by F. E. MacPherson, B. A., of the Normal School. As an introduction, he asked how many could really say that they liked history, and answering the question himself said it would be surprising to know that very few could honestly answer in the affirmative. Specifying this field of study to the children, he said that they should be made to like history, as it was one of the best studies in the school. "It has been said that history is a memorium," continued the speaker. "A teacher gives a child a certain paragraph to memorize, and all they get in their mind is the words, verbs, and have no knowledge what it means. I want to teach them to understand, and I also want to condemn the teaching of history out of that little brown history book which is used in our schools, for it is due to that our scholars are so backward in this branch of learning. What we really want them to do is to not to memorize it verbatim, but to digest it, and draw from it points which will be of benefit to them in after life."

Mr. MacPherson advocated that every boy should be taught in the form of a story, making it interesting and telling it in such a manner that the student can easily understand it. "I want to condemn, and I also want to condemn the teaching of history out of that little brown history book which is used in our schools, for it is due to that our scholars are so backward in this branch of learning. What we really want them to do is to not to memorize it verbatim, but to digest it, and draw from it points which will be of benefit to them in after life."

Mr. MacPherson advocated that every boy should be taught in the form of a story, making it interesting and telling it in such a manner that the student can easily understand it. "I want to condemn, and I also want to condemn the teaching of history out of that little brown history book which is used in our schools, for it is due to that our scholars are so backward in this branch of learning. What we really want them to do is to not to memorize it verbatim, but to digest it, and draw from it points which will be of benefit to them in after life."

The subject is wide," said he, "and I have divided into three sections, a general discussion, and the particular application of history to the study of geography and history."

The speaker continued, "The first thing I want to do is to tell the little ones stories, then gradually work in history, science, and other subjects. The fourth law of nature is very often taken for the first and only law, but that is not true. There are other laws, and that is what I want to teach them. You have a picture that illustrates your remarks, show it to them, and you will find they learn just twice as fast."

Mr. MacPherson then spoke of his reading historical novels, claiming that they are not true. Well, let me tell you that some good and great writers, like Marlowe's plays, and great historical novels, and, for instance, Marlowe's works are of such a nature that good and bad are there."

"The fourth law of nature is very often taken for the first and only law, but that is not true. There are other laws, and that is what I want to teach them. You have a picture that illustrates your remarks, show it to them, and you will find they learn just twice as fast."

A great deal of applause was accorded the speaker, after which, to the delight of all, Miss Johnson and Prof. Johnson gave an excellent vocal duet, and their round of applause was a "Wee Bit Land" was much appreciated.

Mr. C. A. Chant, M. A., Ph. D., of the faculty of the University, as the president of the Student Union, whose address was illustrated by lantern slides.

He referred to the number of tame, the number of wild, and the number of many wonderful objects that can be seen amongst the stars, and the number of the components of the solar system.

In speaking of the stars in the heavens, he said that they were too numerous, as had been stated so often. "In fact, there are 'three' stars in the sky, stars visible to the naked eye."

He was a small part of opera glasses applied the speaker's words are greatly multiplied. A German astronomer calculated all the stars through a telescope, and charted just 324,000. Of course the bigger the telescope, the more stars that are visible. There were also photographic plates of the stars, and were interesting, to say the least.

A feature of the meeting was the singing of Miss Estelle Carey, who rendered several solos in a most appreciable manner.

We then adjourned as chairman of the evening and in a brief address, told many witty stories that caused a ripple of merriment past the overture.

Speaking of the progress of the meeting, he stated that it was one of the noblest, and he asked the teachers of this city to remember the responsibilities we have as regards our duty to go about their work in a manner as though it were a drudgery. "I believe," said he, "that the teachers of this city are fully numerated, and also there should be some provision made when they retire."

In concluding, he spoke of the good management of the Collegiate, telling several stories that well illustrated his point.

The "Dame des Gratiennes," as well known to all, was received by the Hamilton Collegiate, Institute Orchestra, and in the absence of Mr. Eric Thiman, Miss Estelle Carey again delighted the large audience.

The speaker of the evening was Rev. Carl D. Case, B.D., Ph.D., pastor of Daniel Street Methodist Church, Buffalo, and he took as his subject "Two Educational Principles." He advised them to get out board, in that he believed it would help when the question of an increase came up.

The speaker said, "Democracy was," he said, "able than us, as it was the subject of speech, Germany has gone away ahead of the United States in social progress, and this is a sure sign now. You people here are ahead of us in that with us at no time is any one free from the fear of mistreatment, or demands for payment before we give freedom to the Philippines, it takes a hundred years or so before a government can be sure it is good, and secure a place in the sun. It is a great task, he paraphrased Abraham Lincoln, in that "you can fool some of the people all the time, and some of the time, all the people all the time." Laws have been placed on the statutes, that should never have been passed, and it is a great task, this task of democracy, it simply means the training of in-

dividuals and the development of their possibilities on all lines.

"You have to educate and develop the children ethically and socially, and unless you do this you have failed in your duty."

"In the United States we have many foreign influences that have impacted themselves upon us. Can you imagine what would happen if we had not taken these children in hand and trained them in our educational system, and do you know these children are more patriotic than our own children? This is as it should be. No statistics show that those little children in the United States at the age of fourteen, and what patriotism they imbued must be gained in a few years at school."

It is evident that the children he taught to let their imagination run only on high ideals—no matter if they be impossible. He said, "If you want to have a fine ideal of life and have it always with you."

Dr. Case continued to speak of the speaker's happy life, "when if the conditions are the same here as in my country?" Many over there claim that they have better opportunities for school children, and I myself say that we should make some of our problems harder and develop their will power. We should let them know that they have to fight and work his way through superior to the average rich man's son. The difference between the two can be noticed in their examination papers. He asked those present to try and remember immediately, the visitor who had come to discuss the results of the visionary power and individuality.

The hearty vote of thanks was tendered the speaker.

**FRIDAY MORNING SESSION.**

Like most of the previous speakers, Mr. MacPherson, B. A., the first to address the Hamilton Teachers' Institute, this morning, spoke of the poor salaries paid the teachers, claiming that what was paid at present was hardly a living wage.

This gentleman took as his subject, "Nature Study in the Public Schools." He said that the first step in bringing the scholar within his or her environment. "All the scientific qualities that we need to teach this subject are to be found in the natural world, and the little one to see and understand the same as yourself." He advocated the same year could be used to teach different subjects, according to the time of year they could be taught direction; they could ask what color the sky was, and what the clouds were, and in this way a way of thinking this, said that it could be taught in a story form, the characters to be a man, cloud, etc.

Every once in a while I think that tomorrow I'll wake up and go back to sleep again," he said, "but I am happy, it is all so different from my dreams. I can ask about some older experiences, and then I can bring them up again."

Someway I have never yet been and find myself still seated down for a time in a chair, waiting for him.

Every once in a while I think that tomorrow I'll wake up and go back to sleep again," he said, "but I am happy, it is all so different from my dreams. I can ask about some older experiences, and then I can bring them up again."

## MAWSON'S TALE OF PRIVATION

**Antarctic Explorer Tells Story of His Expedition**  
**OFFICIAL REPORT**

**Shows Results of His Party's Work.**

London, Feb. 26.—Dr. Douglas Mawson, who departed from Hobart, Tasmania, on December 1, for the Antarctic, returned to civilization to-day, arriving by the ship Aurora at Adelaide, South Australia. The principal object of the expedition was the exploration and survey of the coast line of the South Polar continent, and Dr. Mawson announced on his arrival at Adelaide that the trip had been eminently successful.

The Aurora was sent south early last year, and took back the explorers, but was forced to leave the Antarctic without Dr. Mawson and five of his companions. It was learned at that time that two of the members, Lieut. Ninnis and Dr. Mertz, had met death by accident while on a sledging party with Dr. Mawson, who had told today was alone for a month after the loss of his companions, and nearly perished from exposure.

Dr. Mawson's own account of this adventure is dramatic in its reticence. "In the month which was consumed on the long hard sledge journey with starvation, and on the other with a war upon the miles that lay ahead," he briefly writes, "I did not dare to be remiss."—The same strain of repression he adds: "My skin, hair, and nail came off. Unexpectedly I found a foxhole left by a fox in a crevass party, and reached the hut eventually. I am now well again."

The Adelaide correspondent of the Daily Telegraph, in his interview with Dr. Mawson, continues the story. He says that Dr. Mawson was reluctant to say much about what followed the death of Dr. Mertz. He quoted Dr. Mawson as saying:

"I had the most marvelous escape. I was down to the last stage of starvation when suddenly, while tramping in deep snow, I saw something black. It was a bit of food which had been dropped carelessly sent to find me. It was twenty miles to the hut, at a place where no previous caravan had ever been."

Dr. Mawson had reached the hut after a most melancholy journey and much suffering. In telling of the work done by his party, Dr. Mawson said: "With the exception of the deaths of Dr. Mertz and Lieut. Ninnis, the condition was most fortunate. That is to say, we were not lost, nor did we die of exposure. No one has lived a braver life than either of them."

**THE OFFICIAL REPORT.**

(By Dr. Douglas Mawson.)

Adelaide, Feb. 26.—Following is a summary of the work accomplished by my expedition to the Antarctic, which arrived here to-day on board the Aurora:

First.—The initial negotiations for the sale of Antarctic supplies from the sphere of action where conditions were practically unknown, resulting in the discovery of new lands and new species.

Second.—The establishment of two Antarctic wintering stations separated by an air line of 1,000 miles, now in operation, and successfully maintained.

At these stations scientific programmes have been conducted, in one case for a period of one year, and in the other extended to two years.

Third.—Journeys made over sea ice and a plateau region never before visited, extending over an area approximately 2,400 miles, and a western base of 80 miles, which figures do not include journeys supporting parties to the rear.

Four.—The first journeys have been followed through 23 degrees of longitude, 27 of which were sledged over.

Fifth.—The establishment of a party at Macquarie Island, a sub-Antarctic possession of the Australian Commonwealth, where two years were spent in meteorological observations, the island and acting as a wireless connecting link with the Antarctic in the transmission of information on weather conditions daily to the Commonwealth's meteorological office for immediate use in preparing forecasts.

Sixth.—The first journeys of soundings and trawlings, prosecuted from the plateau region, the island of Macquarie, and the Antarctic and along the Antarctic continental shelf. Trawlings have been successfully conducted to a depth of 1,000 fathoms.

The continental shelf has been indicated through 55 degrees of longitude.

**THE FATAL SLEDGE TRIP.**

Regarding the party I led: My companions were Lieut. B. E. Ninnis, of the Royal Engineers, and Dr. X. G. Mertz, a Swiss medical student.

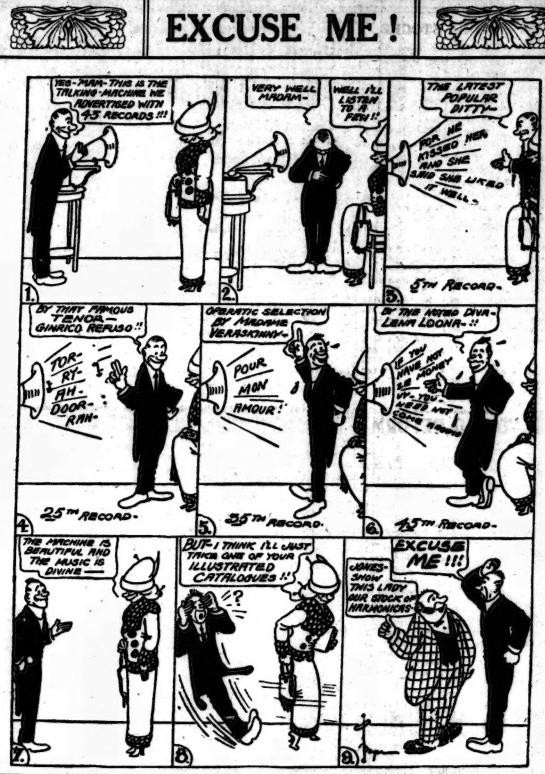

The object of the sledge was to ascertain the nature of the land in that direction. We were assisted by 16 dogs in dragging a load of over 1,700 pounds.

The morning of Dec. 14 found us in latitude 68 degrees, 53 minutes' south and longitude 151 degrees, 35 minutes' east, about 1,000 miles from the Cape of Good Hope.

The track had lain over plateau heights and crevassed glacial depressions, three of which were encountered, and the dogs had to make frequent ascents and as much descent. All were in high spirits. All trouble seemed to be past, and we had arrived on an unbroken plateau with a clear sweep of coast to the east, and it was decided to keep the track at a safe distance from the edge of the crevassed coastal downfalls.

Dec. 14 was a beautiful day. We were in the middle of the plateau when my overcoat was torn. On the skis as a trail breaker, was a quarter of a mile in advance of myself, and the rest of the party followed. Lieut. Ninnis with a team of dogs dragging a sledge, on which was packed the scientific equipment, had to turn back because his sledging movement had been adopted because it was thought that if any was to suffer by crevasses it would be the first ditch.

Believing we were outside the danger zone, I was greatly surprised to observe the faint outline of a crevasse crossing. Mertz had crossed without

## NIAGARA GROWERS

**Peninsula Fruit Men Hear Advice From Experts**

**At Annual Convention in St. Catharines.**

Harding back, we came to the garden, where the plants were perfectly trained, and my eye beat the great expansion and snow and ice. Where, then, were Ninnis and his team? Then the possibilities of the crevasses dawned upon me.

NINNIS DISAPPEARS.

Looking behind, soon after, what had been the most dangerous point, I did not see him. The great expansion and snow and ice. Where, then, were Ninnis and his team?

He had gone down to where we knew him, but certainly to instantaneous death.

Hastening back, we came to the garden, where the plants were perfectly trained, and my eye beat the great expansion and snow and ice. Where, then, were Ninnis and his team?

The remains of what Mertz and I had only one and a half weeks' man's food, and no food at all for the six weeks' sledging. The remains of a tent, a sparse tent cover, and a frame was improvised by using a pair of skis and the tent poles. The tent was picked up in an old camp.

We decided that by eating the dogs we would have food enough to reach the safety of the plateau. The sledging was breaking up. Nine hours after the accident I read the burial service and the news of the accident.

The food was apportioned on a mile-a-mile basis. The men were fed until they were full, and the dogs were left. There was no nutriment in their flesh, and no marrow in their bones.

Early the first week in January we arrived 100 miles from the hut. Our arduous task was to make a trail to the plateau, and Mertz was left alone and very weak. The weather was abominable. Day after day there was dense falling snow and driving snow, and one in good condition. The stages of a few miles were covered with great difficulty.

**THE DEATH OF MERTZ.**

On Jan. 3 it became evident that my comrade's condition was worse than my own. Even the best tools and the best food could not help him. Mertz was very cheerful, and I could not have wished for a better companion. The same applied to Ninnis. Both were fine men.

The weather became a little clearer. The sun, but owing to the slippery surface, was not able to melt the snow. The track had lain over plateau heights and crevassed glacial depressions, three of which were encountered, and the dogs had to make frequent ascents and as much descent. All were in high spirits. All trouble seemed to be past, and we had arrived on an unbroken plateau with a clear sweep of coast to the east, and it was decided to keep the track at a safe distance from the edge of the crevassed coastal downfalls.

Dec. 14 was a beautiful day. We were in the middle of the plateau when my overcoat was torn. On the skis as a trail breaker, was a quarter of a mile in advance of myself, and the rest of the party followed. Lieut. Ninnis with a team of dogs dragging a sledge, on which was packed the scientific equipment, had to turn back because his sledging movement had been adopted because it was thought that if any was to suffer by crevasses it would be the first ditch.

Believing we were outside the danger zone, I was greatly surprised to observe the faint outline of a crevasse crossing. Mertz had crossed without

management of the orchard. Much of the failure of orchards, he said, was due to the fact that the trees were not kept moist until the tree was well set in the ground. New trees especially should plan the varieties they planted according to the soil and climate.

There was too much rain and unplanned planting. He strongly advised the planting of trees in boxes, as this was a great saving of time and labor.

Prof. W. T. Macoun spoke on the influence of temperature on fruit, and the effect of temperature on the growth of fruit. His address was well received.

In a talk on the influence of temperature on fruit, he said that the amount of heat received was paid off to this account on our general high summer temperatures.

Mr. Macoun also said that the amount of heat received was paid off to this account on our general high summer temperatures.

Mr. Macoun also said that the amount of heat received was paid off to this account on our general high summer temperatures.

The death occurred at Teulon, France, of Vice-Admiral François Faillie, who was Minister of Marine in the French Cabinet on three occasions. He was ninety-three years old.

Definite advices were received at New York, at the offices of the Red Cross Line that the British liner Lingan had been picked up by the Red Cross ship, the Norwegian 125-masted cat of Cape Cod and was being towed into Boston.

A man named Ball was arrested down in the C.P.R. yards at Hamilton, his right engine, and was so seriously injured that he was taken to the hospital, where he had both legs amputated.

While attempting to get off his car while it was motionless, Elmer Ball, a colored water running on the dining car of the Sun Line express train, fell beneath the wheels and was almost instantly killed at the village of the village of Eudora.

Peggy, a girl to the late Cardinal Rinaldi, was arrested at Hamilton in consequence of apparently incendiary statements which she made during a search of the villa in which the late cardinal in Santa Maria Palace.

## SMITH IS GUILTY

Chatham Negro Sentenced to Hang May 8.

Chatham, Ont., Feb. 26.—Frank Smith, a negro, was this afternoon found guilty of the murder of James Conyers and was sentenced to hang on May 8. William Currie, who was also charged with the murder, was acquitted. The trial was before Chief Justice Falconbridge.

Conways was established in a room at the end of the church in fall. After the stoning Conways walked up town, and was afterwards taken to the hospital, where he died of peritonitis.

The trial was held before Chief Justice Falconbridge.

Conways was a stable boy in a room at the end of the church in fall.

After the stoning Conways walked up town, and was afterwards taken to the hospital, where he died of peritonitis.

The trial was held before Chief Justice Falconbridge.

He charged that no effort was made to ascertain the persons who were aiding in their statements.

Adolph Doehler, chief wireless operator on the Nantucket, read a book which he had written which may have averted the sinking of the Monrovia as his ship moved unheeded into him, according to admissions made by him on the stand earlier in the day.

According to Doehler, he heard the Monroe and Hamlin, the first ship of the Old Dominion Line, "talking" by wireless at intervals until a few minutes before the accident.

He denied that their positions and other gossip, he said, but he admitted that he did take his attention from his book long enough to notice doehler, whom he was saying to each other. Nor did he take the trouble to report to Captain Barry that other ships were in the vicinity of the Monroe when he sank.

Mr. Crimsoebach—see an ostrich never goes straight to its nest, but always approaches it with many windings and detours, in order to prevent detection.

Mrs. Crimsoebach—Do you know, John, that you remind me of an ostrich when you're coming home.

Providence Journal.

One of the Eight Beautiful Women Picked by Artist

Miss L. Thomas

Miss L. Thomas, who places her on the list of the eight most beautiful women in New York.

## TAX REFORM

Ontario House Again Votes It Down.

Mr. Rowell Disappointed at Actions of Government.

Toronto, Feb. 26.—The debate on the address in reply to the speech from the throne in reply to the speech from the throne yesterday was concluded in the Legislature yesterday when the Government rejected the bill, failing to propose legislation for tax reform. With the exception of a short period near the close, when the storm regarding the Evangeline affair broke afresh, the time of the House was occupied entirely with the tax reform amendment. The Budget will be brought down next week.

The Liberal members touched the question from many angles, showing how by the present system development was retarded in both urban and rural districts. The Government, however, refused to recognize the necessity of reform and voted the amendment down by 51 to 17.

Mr. J. C. Elliott, who moved the amendment to end the inequality of the assessment in the Province by pointing out that the assessment of York county, despite the fact that large areas of the province were very valuable, was \$10,000,000 lower than the Midlothian assessment.

Other Liberal speakers showed the need of relief for the part of the Province, Mr. Alan Stodhouse, the Labor member, made a stirring argument in favor of the entire bill.

The committee had no option but to accept the amendment as a result of arbitration over the cost of architect's fees in connection with the city hall basement improvement.

"That was a pretty expensive job," observed Alder Birrell. "We can't afford that as an ex-Mayor Lee's mouth-

matters."

Mr. A. R. Thompson (Cente Simon) spoke for the Government, the former admitting that the assessment system might be improved if the principles involved in the Liberal amendment that the House regretted the failure of the Government to propose a remedy for the assessment law, or to comply with the demands of municipalities, farmers, associations, and manufacturers for legislation authorizing municipalities to assess or tax buildings and income on a basis that less than 100 per cent.

"The present system of taxation in Ontario is one of the worst in Canada," said Mr. Elliott.

To make the boy stay with the farm it is necessary to penalize to the last possible extent the labor of the farmer.

A rigid system of taxation would not only bind the soil to the farm, but it would bind the complaints men to them.

Why did Toronto citizens a little over a year ago vote as they did in the matter basic that less than 100 per cent.

"The present system of taxation in Ontario is one of the worst in Canada," said Mr. Elliott.

To make the boy stay with the farm it is necessary to penalize to the last possible extent the labor of the farmer.

A rigid system of taxation would not only bind the soil to the farm, but it would bind the complaints men to them.

Why did Toronto citizens a little over a year ago vote as they did in the matter basic that less than 100 per cent.

Mr. T. Maguez (Montague) and Mr. R. J. McCombe (Fast Land) supported the amendment.

"Once the hour I do not intend to make any lengthy remarks on the amendment of my friend, Mr. Elliott, because I think that the public interest demand to express my great disappointment that we have no such a recommendation from the convention that will meet the urgent demands throughout this Province, from one end to the other," the vice-president said.

The views expressed by East Hamilton of the widowed demands for dealing with this question.

KATHARINE DISTRIBUTING HIS SONS Berlin, Feb. 26.—Another step was taken by the Canadian government in the policy of distributing his sons throughout Germany. Prince Elieff Friedrich was to be appointed in the autumn commandant of the Crown Prince's Mounted Rifles at Kiel. Prince August William, the son of the King, will be the first recruit.

The Crown Prince is on the staff in Berlin, and the King's son, Prince Joachim, is serving with his regiment at Cassel.

CHILDREN CRY FOR FLETCHER'S CASTORIA

## BACK TO OLD CONDITIONS

Market Changes of Last Year Being Wiped Out.

## OFFICE FOR HYDRO

Commission Advised to Use Its Own Quarters.

The Property Committee last night passed without a murmur the suggestion to return the office of the commission to Central market. This action was vigorously advocated by a score of farmers and merchants two weeks ago, particularly as it gives the city an annual revenue of \$1,200, and also allows a farmer to occupy the same stand day after day, to the convenience of market officials and purchasers. Controller Gardner, Chairman Garson and Aldermen Birrell and Gleadow advocated the same course.

Another improvement was urged by Controller Gardner, an energetic worker on the committee. He asked that the present location of the fish stands be changed to the east side of the walk leading south in the centre of the market from Merrick street. These, the controller pointed out, could be connected with the sewer pipe on Merrick street, a rent of \$1.25 a week could be had, and \$1 for the others. This proposal was unanimously adopted.

Another proposal was urged by Controller Gardner, an energetic worker on the committee. He asked that the present location of the fish stands be changed to the east side of the walk leading south in the centre of the market from Merrick street. These, the controller pointed out, could be connected with the sewer pipe on Merrick street, a rent of \$1.25 a week could be had, and \$1 for the others. This proposal was unanimously adopted.
